

DE PEST PREVENTION

Warehouse and Distribution Center Service
A SAFE ALTERNATIVE TO HAZARDOUS PESTICIDES

WHAT WE PROVIDE:

DE Pest Prevention provides a proprietary service that protects their clients and their facilities from crawling insects. Our barrier treatment, installed in the wall voids during construction, will provide an insect prevention barrier that controls such pest as cockroaches, ants, fleas, mites, earwigs, spiders and other crawling insects before they have a chance to colonize and nest without the use of commonly used hazardous pesticides.

The application takes place during construction. Existing facilities can be treated with the proper planning and execution.

In most warehouse and storage facilities, "Hitchhiker" insects can not be avoided. These are the insects that enter your facility in the cardboard boxes carrying inventory or on the pallets that others provide. Our proprietary product and applicators can be purchased for your facility maintenance department use by contacting your DE Pest Prevention representative.

WHAT YOU GAIN:

Your facilities gain internal protection against crawling insects and your staff gains a safer working environment. The barrier stays in place and fully effective until it is physically removed. The effectiveness is indefinite! Commonly used pest control Toxins and Hazardous Chemicals will no longer be a threat to your facility, contents, and staff.

A DEPP representative will complete a walk through with the facilities manager and/or owner to explain the service provided. Contact information will be provided to purchase our product and applicators. This will provide the facilities maintenance personnel the ability to perform spot maintenance of pallets and materials arriving on an as needed basis. This will give further protection of the facility and its stored goods for crawling insects.

WHAT YOU AVOID:

You will avoid contact and exposure to Toxins and Hazardous Chemicals that are commonly used in pest control practices today. Your staff will be healthier, your facility will be healthier and your clientele will be healthier!

DURING CONSTRUCTION TREATMENT

- Exterior Wall Voids
- Interior Wall Voids Adjacent to Storage Area
- All Plumbing and Electrical Breaches in the Foundation,

Insects can go undetected in wall voids, under cabinets, and in stored items for months!
DEPP's service ensures that these insects do not have a safe place to hide.
